30 YEAR OF RACING

TM Performance was founded in 1998, first as Turbo Motor, and starting from 2006 it evolved into TM Tecnologie Meccaniche Srl, thanks to the passion and thirty years' experience of its founder, Gianni Frabetti. The company is positioned as a strategic partner in the development and production of high-precision components for the motorsport, OEM and aftermarket sectors.

TM Performance's strength lies in its ability to combine speed of execution and operational flexibility, allowing it to quickly seize new opportunities and respond to customer needs with tailor-made solutions.

Specialised in the design and realisation of unique projects for the automotive sector, TM Performance is also distinguished by its presence in all major national and international championships, both circuit and rally, confirming its ability to offer the market, winning solutions for the world of motorsport.

TM Performance nasce nel 1998, prima come Turbo Motor, dal 2006 si evolve in TM Tecnologie Meccaniche Srl, grazie alla passione e all'esperienza trentennale del suo fondatore, Gianni Frabetti. L'azienda si posiziona come partner strategico nello sviluppo e nella produzione di componenti ad alta precisione per il motorsport, il settore OEM e l'aftermarket.

La forza di TM Performance risiede nella capacità di combinare velocità di esecuzione e flessibilità operativa, permettendo di cogliere rapidamente nuove opportunità e rispondere alle esigenze dei clienti con soluzioni su misura.

Specializzata nella progettazione e realizzazione di progetti unici per il settore automobilistico, TM Performance si distingue anche per la presenza in tutti i principali campionati nazionali e internazionali, sia su circuito che in ambito rally, confermando la capacità di offrire al mercato, soluzioni vincenti per il mondo del motorsport.

TM FOR OEM

TM Performance is an internationally recognised company for the excellence and superior performance of its products. Thanks to its high standards of quality and innovation, TM is today a valued supplier to numerous OEMs, manufacturers of prestigious Supercars and high performance racing cars.

TM Performance è un'azienda riconosciuta a livello internazionale per l'eccellenza e le prestazioni superiori dei suoi prodotti. Grazie agli elevati standard qualitativi e di innovazione, TM è oggi un apprezzato fornitore di numerose case OEM, produttrici di prestigiose supercar e performanti auto da corsa.

OUR CUSTOMER

RACE EXPERIENCE AND SAFETY ON THE ROAD

TM Performance's experience in motorsport has always been a crucial testing ground for the development of our products and for refining problem-solving capabilities.

The R&D department at TM Performance offers its know-how, combined with cutting-edge technologies and highly specialized engineering support, to design customized solutions tailored to each client, whether for racing car manufacturers and builders of supercars and high-performance road cars.

L'esperienza di TM Performance nel motorsport è da sempre un banco di prova fondamentale per lo sviluppo dei nostri prodotti e per perfezionare le capacità di problem solving.

Il reparto R&D di TM Performance offre il proprio know-how, integrato con tecnologie all'avanguardia e supporto ingegneristico altamente specializzato, per progettare soluzioni personalizzate, perfettamente su misura per ogni cliente, sia per i produttori di auto da corsa che per i costruttori di supercar e auto stradali ad alte prestazioni.

TM FOR MOTORSPORTS

TM Performance's main aim is to guarantee customers optimal performance, execution time and support in the field.

L'obiettivo principale di TM Performance è garantire ai suoi clienti ottime performance, velocità di esecuzione e supporto sul campo.

RACING KNOW-HOW

TM Performance has established its success in the motorsport industry by excelling in the production of "TM High Precision" mechanical components and "TM High Performance" braking systems. The exceptional performance and superior quality of its products quickly gained recognition, enabling the company to become a trusted partner of prestigious race car manufacturers, including Aston Martin-Prodrive, Bentley, Dallara, Ford M-Sport, Ginetta, JAS Honda, Lamborghini, Lancia/Peugeot/Citroën Motorsport, Maserati, McLaren, Mygale, Nissan Motorsport, and Tatuus.

Beyond motorsport, TM's products and services are highly valued by specialized distributors, dealers, prominent racing teams, and small-series tuning specialists, further solidifying their reputation across various automotive sectors.

TM Performance ha costruito il suo successo nel mondo del motorsport, distinguendosi grazie all'eccellenza dei prodotti meccanici "TM High Precision" e degli impianti frenanti "TM High Performance". Le performance e la qualità superiore dei suoi prodotti si è velocemente affermata, permettendo all'azienda di diventare partner di prestigiosi costruttori di auto da corsa, come. Aston Martin-Prodrive, Bentley, Dallara, Ford M-Sport, Ginetta, JAS Honda, Lamborghini, Lancia/Peugeot/Citroën motorsport, Maserati, McLaren, Mygale, Nissan Motorsport, Tatuus

Oltre al motorsport, i prodotti e i servizi di TM sono molto apprezzati anche da distributori e dealer specializzati, team di rilievo e preparatori di piccole serie tuning, consolidando così la loro reputazione in diversi settori automobilistici.

THE BEST PARTNER FOR YOUR RACING PERFORMANCE

-  TM Performance is a leading supplier of racing brake pads and discs, chosen by many winning drivers and teams worldwide. With more than 20 years' experience in the racing, TM Performance offers state-of-the-art solutions to guarantee maximum performance and reliability of your braking system, in all race conditions.

IL PARTNER IDEALE PER LA TUA PERFORMANCE DI GARA

-  TM Performance è un fornitore leader di pastiglie freno racing e dischi freno racing, scelto da numerosi piloti e team vincenti a livello mondiale. Con un'esperienza di oltre 20 anni nel settore delle corse, TM Performance offre soluzioni all'avanguardia per garantire le massime performance e affidabilità del tuo impianto frenante, in ogni condizione di gara.

BRAKING SYSTEMS

-  The real diamond tip of TM production is the TM high performance braking system that has accompanied many of the world's leading racing teams to victory. All braking system components are the result of a fully integrated in-house production process that starts with design and ends with bench and track testing. TM is also capable of creating custom mixes thanks to its partnership with a carefully selected chemical-physical analysis laboratory.
-  L'impianto frenante di TM è la vera punta di diamante della produzione TM che accompagna con i suoi impianti frenanti ad alta prestazione le vittorie dei principali team di competizione sportiva. L'insieme dei prodotti dell'impianto frenante sono il risultato di un processo di lavorazione integrato all'interno dell'azienda che va dalla fase di progettazione fino al collaudo su banco e su pista. L'uso inoltre di mescole customizzate e la collaborazione di un laboratorio di analisi chimico-fisiche con operatori accuratamente selezionati chiudono il cerchio per la produzione di prodotti TM High Performance.

UNDERBODY

TM Performance started out producing mechanical components for the aftermarket and in just a few years, thanks to experience gained in the field and synergy with leading car makers managed to conquer itself a significant market share. TM High Precision components are perfectly suited to all kinds of customisation, and our Technical Department is perfectly capable of developing personalised solutions with exceptional performance levels.

La storia di TM Performance è iniziata con la produzione di componentistica meccanica per il mercato dell'aftermarket e nel giro di pochi anni, grazie all'esperienza maturata sul campo e alle sinergie con importanti costruttori, TM Performance è riuscita a conquistare un'importante fetta di mercato. La componentistica TM High Precision si presta a molti tipi di customizzazione e grazie all'Ufficio Tecnico è in grado offrire soluzioni personalizzate con ottimi livelli di performance.

ENGINE UPGRADING

BUSINESS LINE

 TM Performance designs and develops competition engines, and thanks to its cutting-edge technology and fully in-house production process is capable of offering all-round support from the design stage right up to testing. TM is also specialised in engine Conversion, managing to reproduce components identical to the originals.

 TM Performance progetta e sviluppa motori da competizione e grazie alla sua tecnologia avanzata e al processo produttivo interno, riesce a offrire un supporto a 360 gradi che dalla fase di progettazione arriva sino a quella di testing. Inoltre TM è attiva anche nel processo di Conversione motori, riuscendo a riprodurre componenti identici all'originale.

BRAKE PADS

The TM Performance racing brake pads embody the pinnacle of technological innovation in the motorsport industry. The result of years of research and development, the TM pads are engineered to deliver top-tier performance, meeting the highest demands of professional teams and drivers.

Le pastiglie freno racing TM Performance rappresentano l'apice dell'innovazione tecnologica nel settore delle competizioni automobilistiche. Frutto di anni di ricerca e sviluppo, queste pastiglie sono progettate per garantire prestazioni di livello superiore, rispondendo alle esigenze più elevate di team e piloti professionisti.

Strictly Controlled Production Cycles

Each pad is produced through constantly monitored processing cycles. Every step of production undergoes rigorous control tests, ensuring the highest standards of quality and reliability. This approach allows TM to guarantee the highest standards of reliability and performance.

Ogni pastiglia è prodotta attraverso cicli di lavorazione costantemente controllati. Ogni passaggio della produzione è sottoposto a rigorosi test di controllo, che garantiscono i migliori standard di qualità e affidabilità. Questo approccio permette a TM di garantire i più alti standard di affidabilità e prestazioni.

Innovative Materials for Exceptional Performance

Crafted with exclusive compounds, TM Performance brake pads deliver an optimal combination of performance, durability, thermal stability, and longevity.

These advanced materials ensure consistent grip and precise braking, even under the most extreme conditions, reducing the risk of fading and optimizing control on the track.

Realizzate con mescole esclusive, le pastiglie freno TM Performance offrono una combinazione ottimale di prestazioni, durata, stabilità termica e longevità. I materiali avanzati garantiscono sempre una frenata costante e precisa, anche nelle condizioni più estreme, riducendo il rischio di fading e ottimizzando il controllo in pista.

Special Heat Treatments for Unbeatable Performance

Thanks to innovative heat treatments, TM Performance brake pads offer unprecedented efficiency and stability. These treatments enhance heat resistance and optimize the properties of the braking material, significantly reducing the break-in time. Drivers can immediately focus on race performance, saving valuable time during the initial phase and ensuring ideal behavior from the first laps.

Grazie a innovativi trattamenti termici, le pastiglie TM Performance offrono un'efficienza e una stabilità senza precedenti. Questi trattamenti migliorano la resistenza al calore e ottimizzano le proprietà del materiale frenante, riducendo significativamente il tempo necessario per il rodaggio. I piloti possono così concentrarsi subito sulle performance in gara, risparmiando tempo prezioso nella fase iniziale e garantendo un comportamento ideale già dai primi giri.

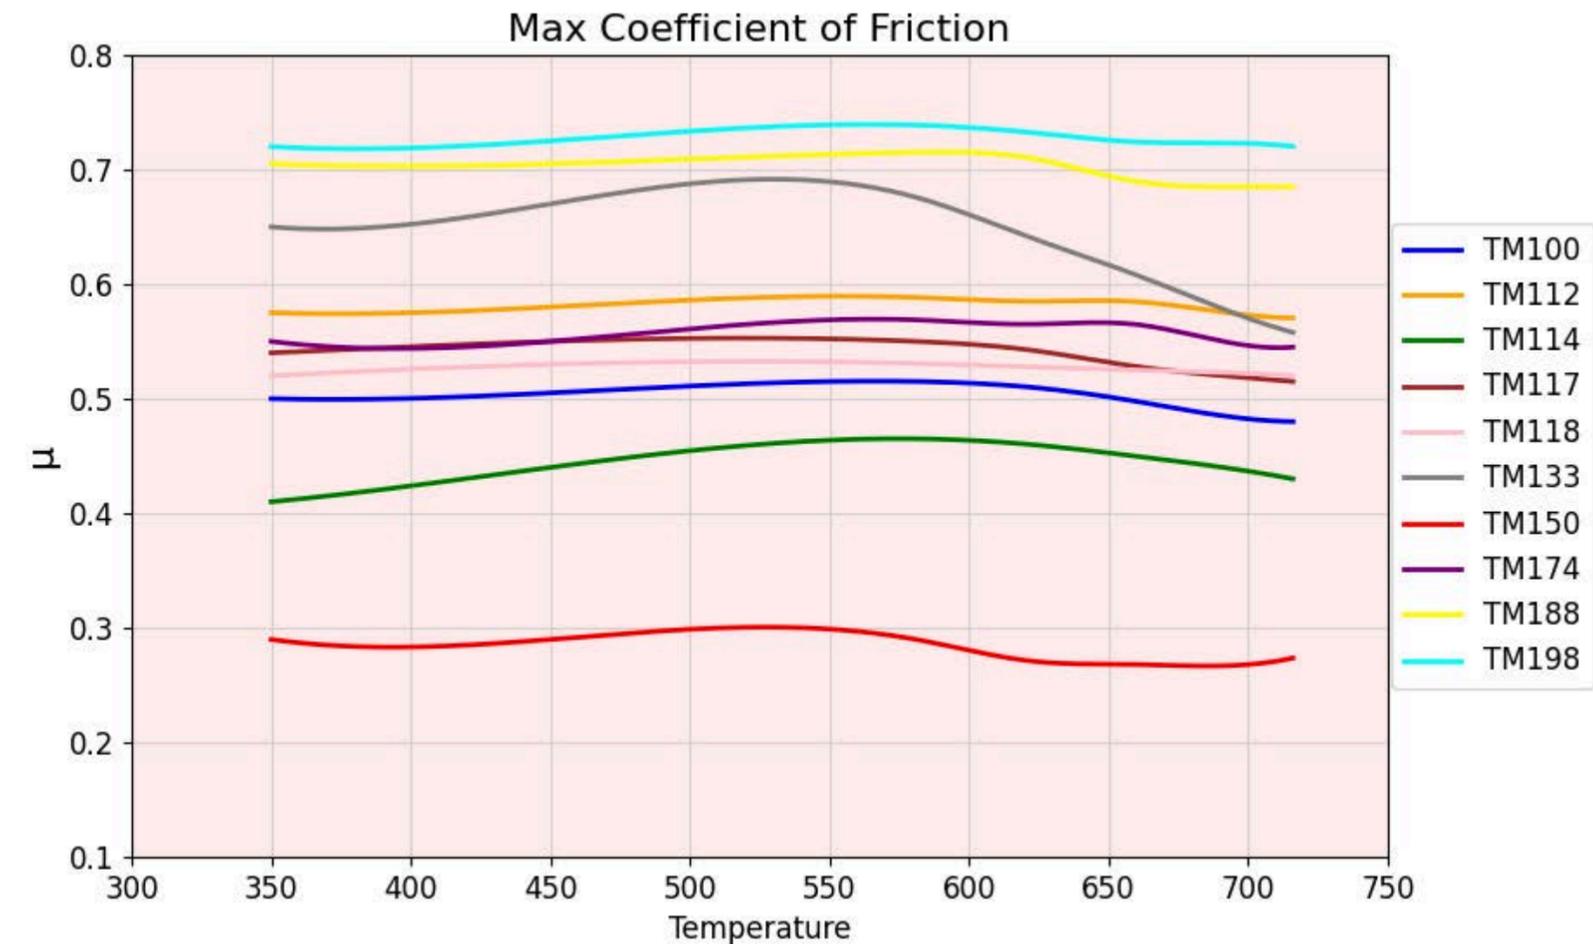

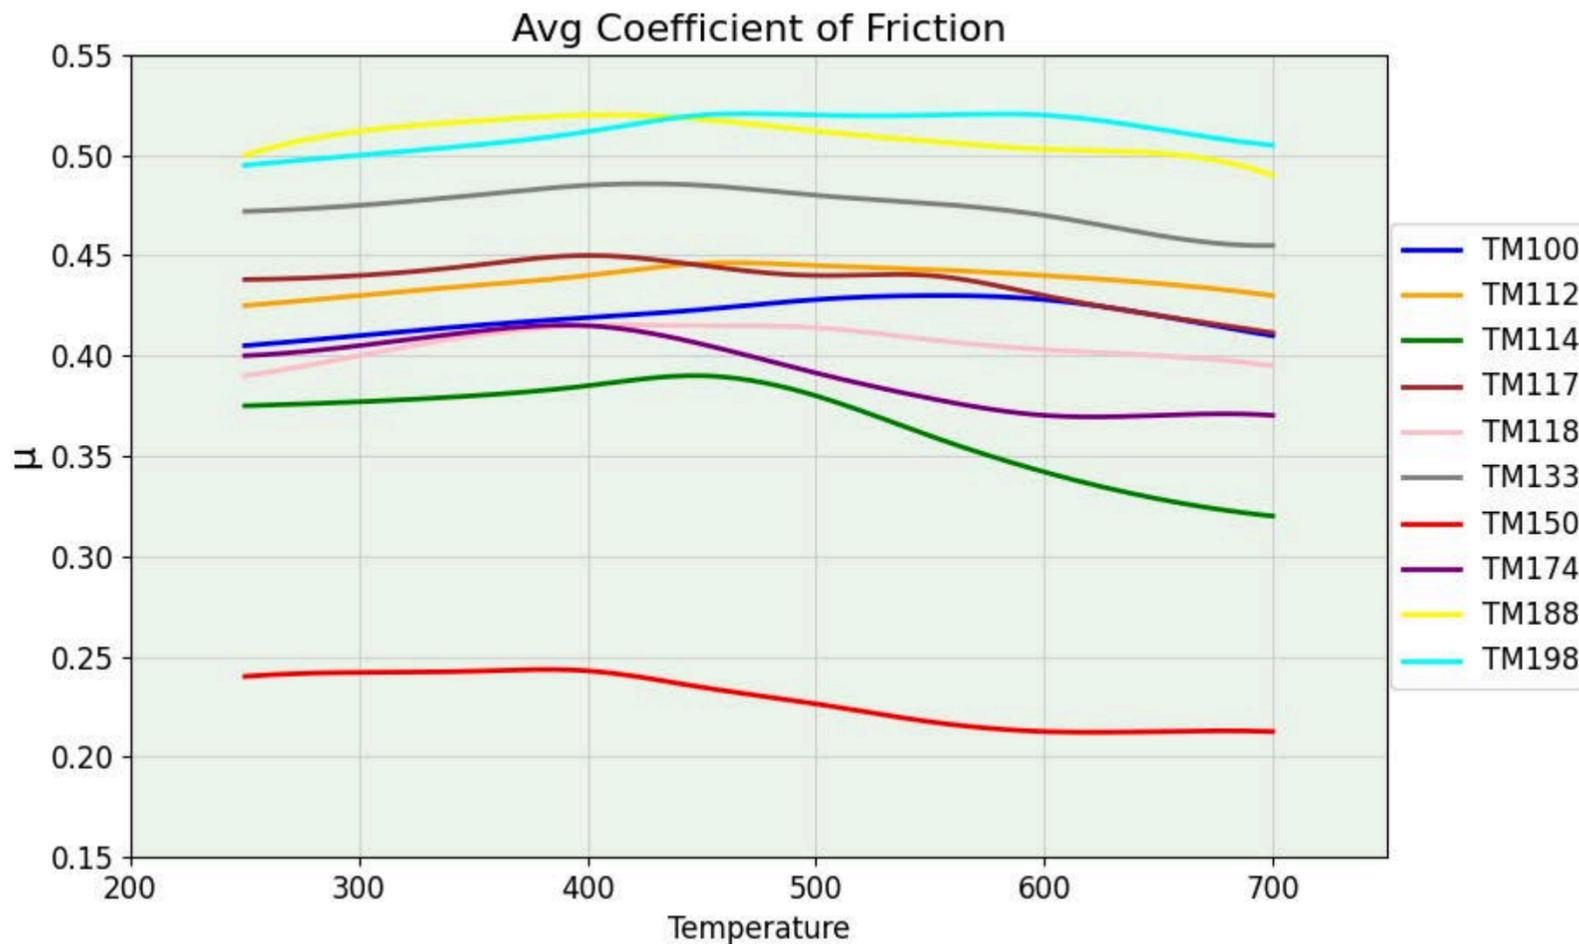

PADS COMPOUNDS

The graphs illustrate the variation of the coefficient of friction with temperature for our most widely used brake compounds. The data is derived from dyno brake tests simulating real-world braking scenarios, performed under varying G-forces, speeds, brake pressures, and initial disc temperatures.

I grafici illustrano la variazione del coefficiente di attrito in funzione della temperatura per i nostri composti frenanti più utilizzati. I dati provengono da test al banco prova che simulano scenari di frenata reali, eseguiti con diversi valori di forza G longitudinale, velocità, pressioni di frenata e temperature iniziali del disco.

- The 'Avg Coefficient of Friction' graph shows the average friction coefficient throughout the tests.
- The 'Max Coefficient of Friction' graph highlights the highest coefficient of friction recorded.

- Il grafico 'Avg Coefficient of Friction' mostra i valori medi del coefficiente di attrito durante l'intero test.
- Il grafico 'Max Coefficient of Friction' evidenzia i valori massimi del coefficiente di attrito registrati.

PADS COMPOUNDS

100

TM100 has a medium friction coefficient, making it ideal when you need slightly more braking force than the TM114. It offers a good balance between stopping power and control, ensuring reliable performance as your braking demands increase.

TM100 ha un coefficiente di attrito medio, ideale quando è necessario un livello di attrito leggermente superiore rispetto al TM114. Offre un buon equilibrio tra forza frenante e controllo, garantendo prestazioni affidabili quando le esigenze di frenata aumentano.

112

This compound has one of the highest friction coefficients suitable for use on the rear axle. It can also be applied to both axles, as is often the case with rally cars. The TM112 offers exceptional modulation and maintains consistent performance even at high temperatures.

Questo composto presenta uno dei coefficienti di attrito più alti utilizzabili sull'asse posteriore. Può essere applicato anche su entrambi gli assi, come spesso avviene nelle auto da rally. Il TM112 offre un'eccellente modulabilità e mantiene prestazioni costanti anche a temperature elevate.

114

TM114 is the next logical step after the TM150 when additional braking force is required for the rear axle. It provides increased stopping power while maintaining the balance and control needed for demanding conditions. If your setup calls for stronger rear braking, the TM114 is a solid choice.

TM114 è il passo successivo dopo il TM150 quando è necessaria una maggiore forza frenante per l'asse posteriore. Offre una potenza frenante superiore mantenendo l'equilibrio e il controllo necessari in condizioni impegnative. Se il tuo assetto richiede una frenata posteriore più potente, il TM114 è una scelta affidabile.

117

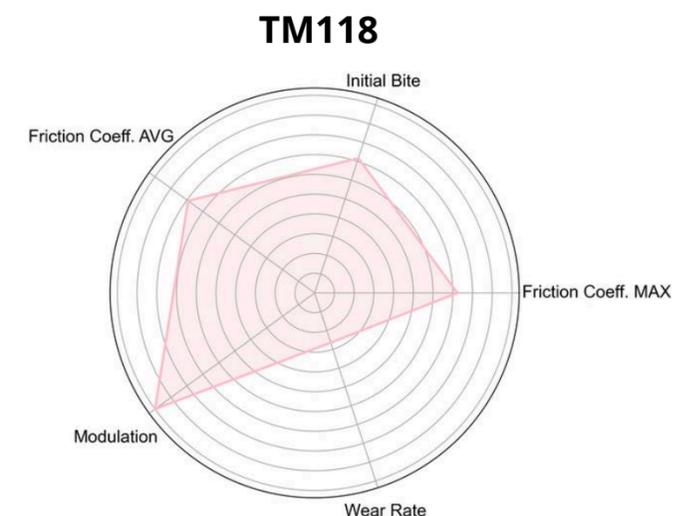

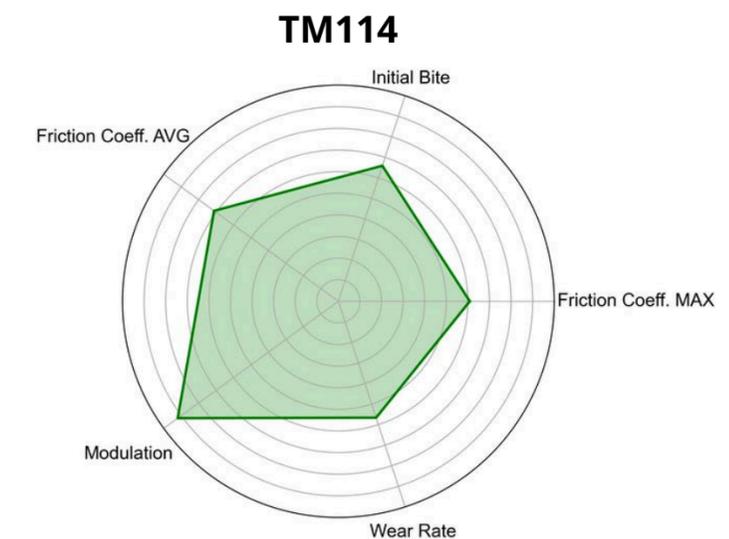

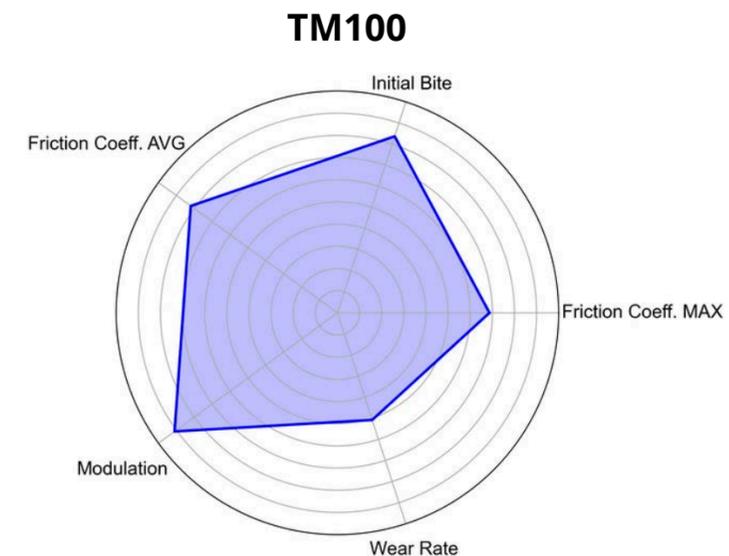

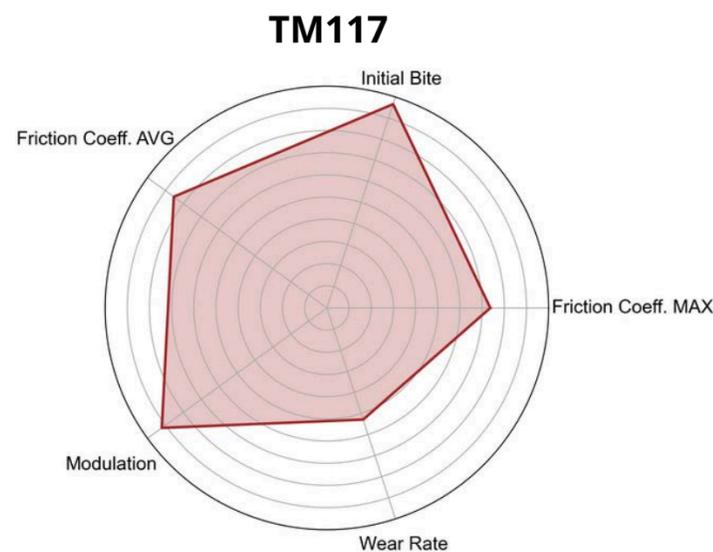

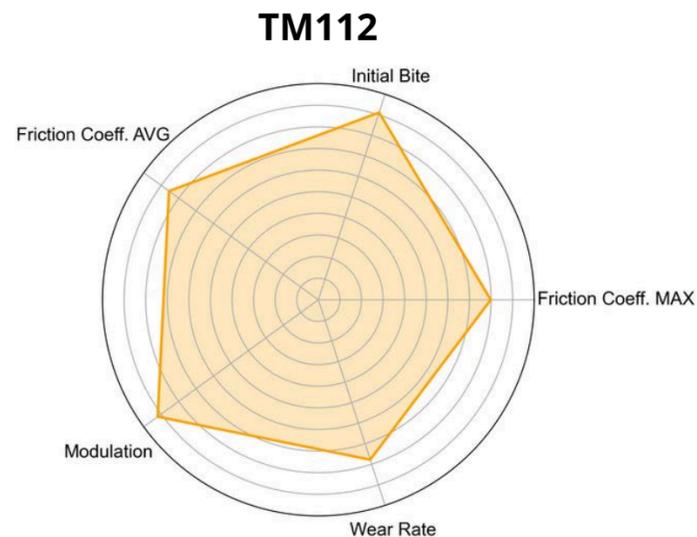

The TM117 is our classic material for the front axle, offering a well-balanced combination of initial bite, medium friction coefficient, modulation, and wear. Widely used by our customers, it delivers optimal results on the track and in rally racing, where it's also effective on the rear axle. This versatile compound is a reliable choice for those seeking consistent performance across different racing environments.

TM117 è il nostro materiale classico per l'asse anteriore, offrendo un equilibrio ben bilanciato tra risposta iniziale, coefficiente di attrito medio, modulazione e usura. Ampiamente utilizzato dai nostri clienti, garantisce risultati ottimali sia in pista che nelle gare di rally, dove si dimostra efficace anche sull'asse posteriore. Questo composto versatile è una scelta affidabile per chi cerca prestazioni costanti in diversi ambienti di gara.

118

Specifically engineered for endurance races, the TM118 delivers exceptional durability over long distances. It ensures a consistent brake pedal feel and stable braking performance throughout the entire race, even under varying temperatures. With the TM118, you can trust in reliable, long-lasting performance that keeps you in control from start to finish.

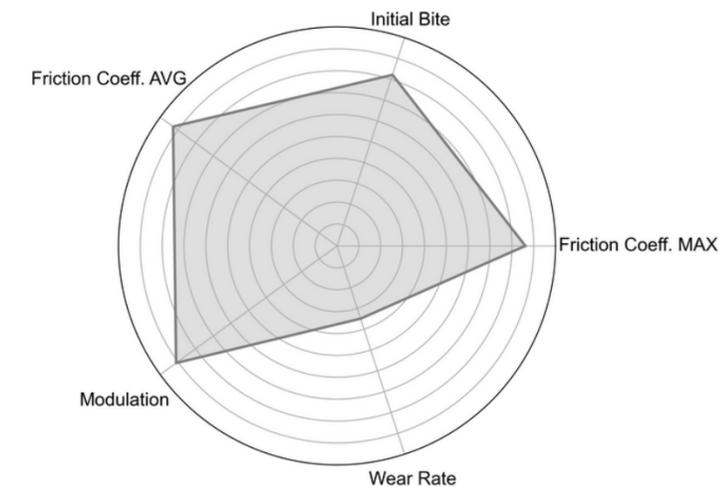

Progettato specificamente per le gare di endurance, il TM118 offre una durata eccezionale su lunghe distanze. Garantisce una sensazione del pedale del freno costante e un comportamento in frenata stabile per tutta la durata della gara, anche a temperature elevate. Con il TM118, puoi contare su prestazioni affidabili e durature che ti mantengono in controllo dall'inizio alla fine.

**133**

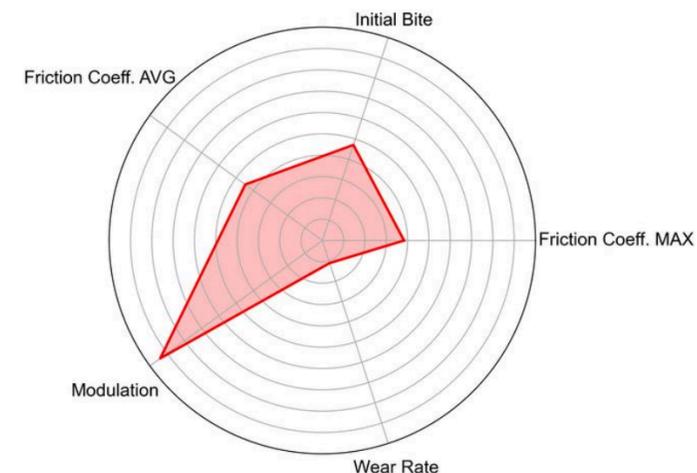

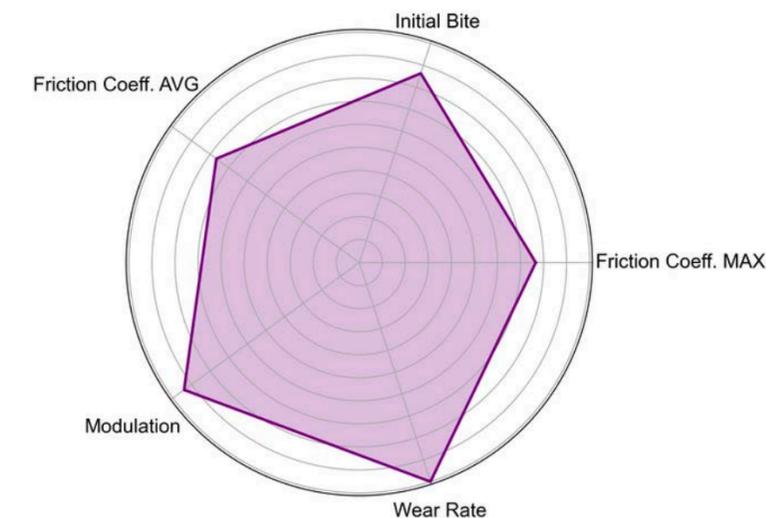

The TM133 is designed for the front axle and is widely used in cars with ABS where a high initial bite is not required. This compound is particularly effective when reducing disc temperatures is a priority. It generates minimal disc heat while maintaining a very good coefficient of friction, making it an excellent choice for applications where controlled braking and lower thermal stress on the brakes are essential.

TM133 è progettato per l'asse anteriore ed è ampiamente utilizzato su vetture con ABS, dove non è necessaria una risposta iniziale elevata. Questo composto è particolarmente efficace quando è prioritario ridurre le temperature del disco. Genera un calore minimo sul disco, mantenendo al contempo un ottimo coefficiente di attrito, rendendolo una scelta eccellente per applicazioni in cui è fondamentale un controllo della frenata e una minore sollecitazione termica sui freni.

TM133**150**

TM150 is an ideal choice for the rear axle, especially popular in GT3 and GT4 cars. This compound offers excellent temperature stability, ensuring reliable performance under demanding conditions. It also minimizes ABS intervention, making it easier to manage braking. Additionally, it provides good balance during trail braking, giving drivers greater control in critical corners. The TM150 is a dependable option for enhancing rear axle performance in competitive racing.

TM150 è una scelta ideale per l'asse posteriore, particolarmente apprezzato nelle vetture GT3 e GT4. Questo composto offre un'eccellente stabilità termica, garantendo prestazioni affidabili in condizioni impegnative. Inoltre, riduce al minimo l'intervento dell'ABS, facilitando la gestione della frenata. Fornisce anche un buon equilibrio durante la frenata in curva, offrendo ai piloti un maggiore controllo nelle curve critiche. Il TM150 è un'opzione affidabile per migliorare le prestazioni dell'asse posteriore nelle gare competitive.

TM150**TM174****174**

The TM174 combines the best of both the TM100 and TM150. It offers the temperature stability of the TM150 with a medium friction coefficient similar to the TM100. This blend makes it an excellent choice for those who need reliable performance and consistent braking behavior across a range of conditions.

TM174 combina le migliori caratteristiche dei composti TM100 e TM150. Offre la stabilità termica del TM150 insieme a un coefficiente di attrito medio simile a quello del TM100. Questa combinazione lo rende una scelta eccellente per chi cerca prestazioni affidabili e un comportamento frenante costante in una varietà di condizioni.

**188**

TM188 is one of our customers' preferred compounds for the front axle, especially in cars equipped with ABS, such as GT3 and GT4 models. While it shares similarities with the TM198, the TM188 offers greater durability with a slightly softer initial bite.

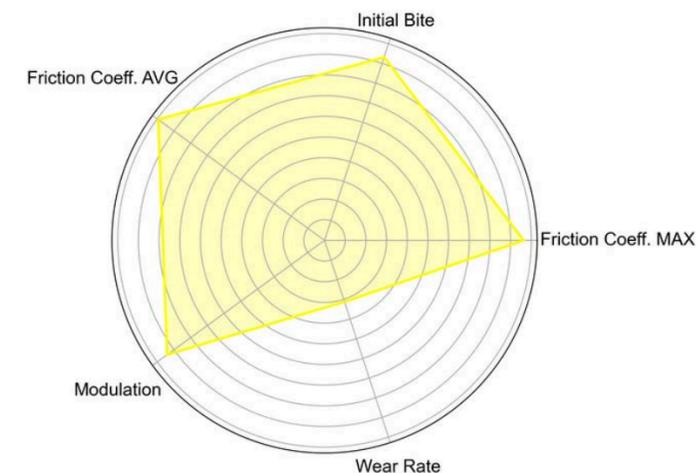

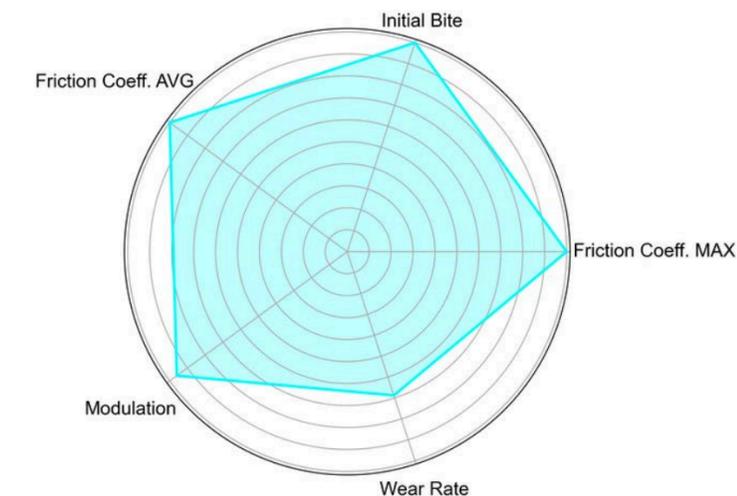

This compound has been carefully engineered to delay the ABS activation at the onset of braking, thereby minimizing braking distance. Additionally, it reduces ABS intervention towards the end of the braking phase, allowing for excellent modulation during this critical period.

Another advantage of the TM188 is that it generates disc temperatures approximately 70°C lower than competitors with a similar coefficient of friction, making it an ideal choice for performance and endurance.

TM188 è uno dei composti preferiti dai nostri clienti per l'asse anteriore, soprattutto in vetture dotate di ABS, come i modelli GT3 e GT4. Sebbene condivida alcune caratteristiche con il TM198, il TM188 offre una maggiore durata con una risposta iniziale leggermente più morbida.

Questo composto è stato progettato con cura per ritardare l'attivazione dell'ABS all'inizio della frenata, riducendo così la distanza di arresto. Inoltre, diminuisce l'intervento dell'ABS verso la fine della frenata, consentendo una modulazione eccellente durante questa fase cruciale.

Un altro vantaggio del TM188 è che genera temperature del disco circa 70°C inferiori rispetto ai concorrenti con un coefficiente di attrito simile, rendendolo una scelta ideale per prestazioni e resistenza.

TM188**TM198****198**

Designed for the front axle, the TM198 compound is an excellent choice for sprint races, particularly when you need to maximize grip with new tires during qualifying or short races. This pad offers superior deceleration compared to others on the market and is easy to modulate, giving you reliable control.

The TM198's exceptional modulation capabilities also make it a popular choice in rally racing, where precision and consistency are key. If you're looking for a brake pad that delivers both performance and reliability, the TM198 is a solid option for both track and rally environments.

Progettato per l'asse anteriore, il composto TM198 è una scelta eccellente per le gare sprint, specialmente quando è necessario massimizzare l'aderenza con pneumatici nuovi durante le qualifiche o le gare brevi. Questa pastiglia offre una decelerazione superiore rispetto ad altre sul mercato ed è facile da modulare, garantendo un controllo affidabile.

Le eccezionali capacità di modulazione del TM198 lo rendono anche una scelta popolare nelle gare di rally, dove precisione e costanza sono fondamentali. Se cerchi una pastiglia freno che offra sia prestazioni che affidabilità, il TM198 è una solida opzione per ambienti su pista e rally.

RACING BRAKE DISCS

For over twenty years, TM Performance has been a benchmark in the racing brake disc industry. Chosen by top teams and manufacturers for their exceptional performance and reliability, these products have contributed to numerous victories in prestigious races and championships. Made from the highest quality materials and developed with cutting-edge technologies, TM Performance brake discs deliver outstanding performance in every type of competition.

Da oltre vent'anni, TM Performance rappresenta un punto di riferimento nel settore dei dischi freno da corsa. Scelti da team e costruttori di alto livello per la loro eccezionale performance e affidabilità, questi prodotti hanno contribuito a numerose vittorie in gare e campionati prestigiosi. Realizzati con materiali di altissima qualità e sviluppati con tecnologie all'avanguardia, i dischi TM Performance garantiscono prestazioni straordinarie in ogni tipo di competizione.

RACING BRAKE DISCS

TM brake discs are manufactured starting from the casting of a special cast iron alloy (equivalent to GJL250), with superior mechanical properties and strength, which also enhances its heat dissipation capabilities. The production cycle includes controlled cooling and a subsequent heat stabilization treatment.

I dischi freno TM sono realizzati partendo dalla fusione di una speciale lega di ghisa (pari alla GJL250), con superiori proprietà meccaniche e di resistenza, che inoltre ne migliora le capacità di dissipazione del calore. Il ciclo produttivo prevede un raffreddamento controllato e un successivo trattamento termico di stabilizzazione.

In the subsequent mechanical processing phases, 100% of the discs undergo flatness checks, followed by complete traceability of hardness and balancing characteristics, ensuring superior quality and performance standards.

Nelle successive fasi di lavorazioni meccaniche, il 100% dei dischi viene sottoposto a controlli della planarità, con successiva tracciatura completa delle caratteristiche di durezza ed equilibratura, a garanzia di superiori standard di qualità e prestazioni.

The selection of special materials and an advanced production process guarantee a stabilized material that reduces/eliminates the need for bedding-in.

La scelta di speciali materiali e un processo produttivo avanzato, garantiscono un materiale stabilizzato che riduce/elimina la necessità di rodaggio.

SPORT BRAKE DISCS

The TM Performance sport road brake discs line, is the result of technological evolution directly derived from our famous racing discs. Made with the same racing-derived materials and designed with engineering precision, these discs offer powerful and constant braking, even in the most demanding conditions. Thanks to specific heat treatments and a design optimised for heat dissipation, TM Performance Sport road discs, guarantee the highest performance, resistance to temperature variations and reliability, both on the road and in sports use.

La linea di dischi freno stradali sportivi TM Performance è il risultato dell'evoluzione tecnologica derivata direttamente dai nostri celebri dischi da corsa. Realizzati con gli stessi materiali di derivazione racing e progettati con precisione ingegneristica, i dischi TM performance Sport Sport Road offrono una frenata potente e costante, anche nelle condizioni più impegnative.

Grazie a trattamenti termici specifici e un design ottimizzato per la dissipazione del calore, i dischi TM Performance garantiscono le più alte performance, resistenza alle escursioni termiche e affidabilità, sia su strada che in uso sportivo.

BRAKE FLUID

TM Performance Fluid is recommended for all types of hydraulic brake that require non-silicone fluid. It is developed to withstand the extreme temperatures generated in ceramic or carbon competition brakes, allowing a lower flow of air for cooling. Exceeds the requirements of the DOT 3 and DOT 4 standards and is compatible with DOT 5.1 (pay attention to temperatures below -20°C).

TM Performance Brake Fluid allows effective and prolonged braking even in extreme conditions of use and has extreme resistance and thermal stability thanks to the very high dry boiling point of $+328^{\circ}\text{C}$ and $+204^{\circ}\text{C}$ wet. Do not mix with DOT 5 silicone-based brake fluids or LHM mineral fluids.

In order to avoid moisture absorption, it is recommended to keep the product in its original and well sealed packaging.

TM Performance Fluid è raccomandato per tutti i tipi di comandi idraulici di freni e frizioni che richiedano un fluido non silconico. E' sviluppato per resistere alle estreme temperature generate nei freni da competizione ceramici o in carbonio, permettendo un flusso di aria per il raffreddamento minore. Supera le richieste degli standard DOT 3 e DOT 4 ed è compatibile con DOT 5.1 (fare attenzione alle temperature al di sotto di -20°C).

TM Performance Brake Fluid permette frenate efficaci e prolungate anche in condizioni di utilizzo estreme e ha resistenza e stabilità termica estreme grazie all'elevatissimo punto di ebollizione secco di $+328^{\circ}\text{C}$ e umido di $+204^{\circ}\text{C}$.

Non miscelare con liquidi per freni a base di silicone DOT 5 o fluidi minerali LHM.

Al fine di evitare l'assorbimento dell'umidità, si raccomanda di conservare il prodotto nell'imballo originale e ben chiuso.
